STAYVE BB GLOW PRODUCTS

BB Glow treatment is a type of micro-needling treatment system (MTS) popular in Korea.

The treatment involves a BB ampoule that contains a minuscule amount of BB components. Stayve BB Glow can contain from 0.95% to 1.89% of BB component depending on the shade.

BB Glow emerged in Korea in 2015 and soon became wildly popular in China. It quickly spread to Southeast Asia in 2016 and the demands increased in Russia, CIS countries, Western Europe, Eastern Europe, and the Middle East the following year. It has now gained recognition in the Americas, making Stayve BB Glow a globally renowned brand.

Stayve is the most popular and sought-after brand among many other brands that offer BB Glow.

We offer BB Glow in various shades for every skin tone. Pre and post-treatment products as well as booster ampoules can be used with BB Glow to enhance treatment results.

WHAT IS MTS?

Ampoules that do not contain BB components or booster ampoules can be used with needles that are 0.2mm-1.0mm in length.

Only nanoneedles or plastic needles should be used with BB Glow ampoules. Long needles should be avoided because of the minuscule amount of BB coloring agent present in BB Glow.

Only KFDA approved, safe raw material goes into the making of the titanium dioxide present in Stayve BB Glow. The same kind of titanium dioxide can be found in BB cream, foundation, toothpaste, chewing gum, etc.

MTS is a treatment system that stimulates fibroblasts and generates collagen by using microscopic needles to prick the skin. This creates an environment that facilitates the penetration of cosmetic products and dermatology drugs with large molecules that do not polarize easily.

Cosmetic products do not absorb into the skin and only remain on the layer of dead skin cells when applied with the hands. Only 0.03% - 2% of the product is absorbed into the skin, and the rest remains on the outermost layer until it gets washed away.

MTS involves the use of needles to increase product absorption. This helps deliver the active ingredients deeper into the epidermis.

Precaution:

Pigments or tattoo inks contain high amounts of coloring and are not considered cosmetics; tattoo inks have more than 20%. These products should never be used in BB Glow treatments.

STAYVE BB GLOW AMPOULE

FUNCTIONAL BB GLOW
AMPOULE CONTAINING
NIACINAMIDE AND VARIOUS
PLANT-BASED INGREDIENTS.

This product helps maintain beautiful skin by providing immediate coverage without irritating the skin. It is ideal to get one treatment per week. Stay consistent with the treatments for a minimum of five sessions. Stayve BB Glow Ampoule contains a very small amount of coloring agent. The treatment is safe since it only involves shorter needles. Therefore it doesn't remain in the skin for a long period of time. It is not a treatment like tattoo or micropigmentation. It does not last on the skin for six months or a year the way tattoos or micropigmentation would. It does last longer than treatments carried out with the hands or typical treatments that involve aesthetic machines.

BB GLOW STARTER KIT

8ml* 12pcs/box

The product with 5 different shades for beginners or academy students. You can pick and choose from a variety of colors this box offers.

LIGHT

8ml* 12pcs/box

Colors used for the brightest skin tones
Ideal shade for people with extra light skin tone

LIGHT ROSE

8ml* 10pcs/box

Color for creating light skin with pink undertones
Ideal shade for people with light tone but with pink undertones

MEDIUM

8ml* 10pcs/box

Product used for medium skin tone
Most popular shade
Ideal shade for people with medium skin tone

DEEP

8ml* 10pcs/box

Most adequate for brown or bronze-tanned skin tone
Ideal shade for people with tanned skin or bronze skin tone

DEEP PLUS

8ml* 10pcs/box

Color for the deepest skin tone
Ideal shade for people with deep skin tone

STAYVE BOOSTER AMPOULE

The Booster Ampoule can be used before BB Glow treatments to enhance treatment results. It can also be used on its own, without BB Glow treatment afterwards. We offer various boosters for different skin types. They are designed to target specific needs such as acne treatment, lifting, brightening, repair the skin or moisture.

BOOSTER STARTER KIT

8ml* 12pcs/box

The Booster Starter kit includes five different booster ampoules. This assortment of ampoules makes it convenient to teach students in beauty academies.

02. SALMON DNA GOLD AMPOULE

8ml* 10pcs/box

The Salmon DNA Gold Ampoule contains peptides and PDRN ingredients extracted from salmon's seminal glands. Peptides improve wrinkles and strengthen the skin barrier while PDRN encourages rapid skin regeneration. Niacinamide and 99.9% pure gold powder brighten and clear the skin.

04. AC STEM CELL GOLD AMPOULE

8ml* 10pcs/box

The AC Stem Cell Gold Ampoule is suitable for acne prone skin. It contains Asiatic pennywort extract; an ingredient proven to fight acne and infections. It also contains 99.9% pure gold powder and acetylhexapeptide-8 to help reduce wrinkles.

01. PEPTIDE GOLD AMPOULE

8ml* 10pcs/box

The Peptide Gold Ampoule contains 99.9% pure gold and ten different peptides such as niacinamide and adenosine. Niacinamide brightens skin tone and adenosine prevents wrinkles.

03. WHITENING STEM CELL CULTURE AMPOULE

8ml* 10pcs/box

The Whitening Stem Cell Culture Ampoule contains various plant stem cell cultures and niacinamide. These ingredients improve skin's elasticity by reducing wrinkles and brightening the skin.

05. AQUA STEM CELL CULTURE AMPOULE

8ml* 10pcs/box

The Aqua Stem Cell Culture Ampoule contains various plant extracts that moisturize dry skin. In addition to fortifying skin's moisture barrier, hyaluronic acid provides moisture deep into the skin, acting as both moisturizer and humectant.

PRE-TREATMENT AND POST-TREATMENT PRODUCTS

MISSMITO MACHINE

Component:
1 of Hand-piece | 1 of Adapter | 4 pieces of MTS needles

The Missmito Machine is used for BB GLOW treatments and micropigmentation.

STAYVE EXFOLIATING GEL

Capacity: 290ml

Use Stayve Exfoliating Gel and Neutralizing Foam to remove dead skin cells before a BB Glow treatment to greatly enhance treatment results. The mandelic acid present in the gel gently removes dead skin in a nonabrasive manner. The Stayve Exfoliating Gel is specifically desinged for micro-needling

STAYVE NEUTRALISING FOAM

Capacity: 150ml

The Stayve Neutralising Foam gently neutralizes skin that has become acidic after exfoliating. Massage the face with this fragrant, foamy neutralizer for about three minutes. Balancing the PH level of the skin creates the optimal skin condition for BB Glow treatments.

REPAIR CREAM FOR FACE AND BODY

1g*100pcs/box

Apply the Repair Cream for Face and Body to accelerate skin regeneration and alleviate dull, dry skin. It immediately soothes sensitivity and tenderness post BB Glow or laser treatments. Apply every morning and night after cleansing the face for three to seven days.

BB GLOW TREATMENT INSTRUCTIONS

- 01
Cleanse the face thoroughly.
- 02
Lightly apply toner on the face with a cotton pad.
- 03
Use a brush to apply a thick layer of exfoliating gel. BB Glow treatment is the most effective after exfoliating. We only recommend using Stayve exfoliating gel, designed specifically for BB Glow treatments. The acidity of Stayve exfoliating gel is optimized for BB Glow treatments. "Dry Skin: 2 minutes, Normal Skin: 3 minutes, Oily Skin: 5 minutes" Stayve exfoliating gel's acidity may cause slight tingling on sensitive skin.

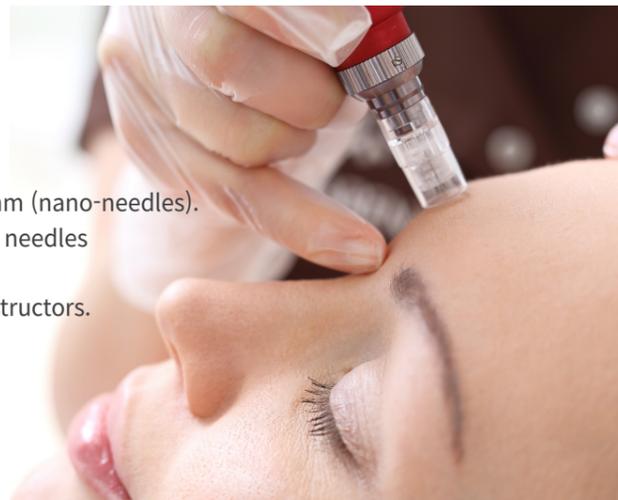

- 04
Wipe the face with a damp towel or sponge.
- 05
Generously apply the neutralising foam with a brush. This will neutralize the acidity caused by the exfoliating gel. Use the hands to gently massage the face for three minutes. Clean the face with a damp towel or sponge.
- 06
Apply the booster ampoule and begin the MTS treatment (2-3 minutes). Select a booster ampoule based on skin's needs such as hydrating, brightening, or lifting. Using a booster ampoule before BB Glow is not imperative. However, doing so will greatly enhance the treatment results.
- 07
Choose a BB Glow ampoule that best matches the desired look. Apply on the face without wiping off the booster ampoule.
- 08
Micro-needle the face for two to three minutes.
- 09
Apply a facial mask or a modeling pack to soothe the skin.
- 10
Remove the facial mask after ten to fifteen minutes. Dab with a damp sponge and allow the skin to absorb the remaining BB Glow.
- 11
Apply the repair cream and a small amount of sunscreen.
- 12
Give ten sachets of repair cream to clients. Instruct them to apply it every morning and night after cleansing the face.

NEEDLE LENGTH AND OTHER INFORMATION

BB GLOW ONLY

Only give treatments with needles shorter than 0.2mm (nano-needles). The Stayve academy instruct students to use 0.5mm needles because the needles are plastic, not metal. Also, the students are supervised by professional instructors. Make sure to adjust the pressure accordingly to minimize wounding the skin.

BOOSTER AMPOULE ONLY

It is possible to use needles longer than 0.5mm. It is recommended to use numbing cream when giving treatments with needles longer than 0.5mm. This is because longer needles may cause pain in areas closer to the bone such as the nose or the forehead.

BB GLOW TREATMENT AFTER USING BOOSTER AMPOULE

It is possible to give BB Glow treatments using needles ranging from 0.5mm up to 0.8mm. However, it is recommended to use nano-needles for both treatments if booster ampoules are used before BB Glow treatments.

HOW TO USE NUMBING CREAM

Use a brush to apply a thick layer of numbing cream on the face. Avoid areas around the nose and the mouth and place plastic wrap over the face. Do not cover the nose and the mouth to breath. Wait for 20-30 minutes. Wipe off the numbing cream completely before beginning MTS.

AFTERCARE

Depending on the skin's condition, refrain from using the sauna or tanning for four to seven days. The skin may get dry after the treatment. Use the repair cream to moisturize the skin. When you go out, make sure to use sunscreen.
