PMU Colors Collection

NPM Pigments Technology:

Color is of great importance to the outcome of the makeup. NPM is providing a selection of stable pigments with over 60 shades. Inside each bottle of color, there is a small stainless steel ball, whose purpose is to mix the color uniformly while shaking the bottle. This method ensures correct mixing ratio between the pigments powder to liquid. This helps to maintain the color quality over time and to prevent the pigment from drying out. All NPM shades come in 12 ml. bottles and they can be mixed together to produce Sub shades.

Correction colors:

According to Isaac Newton color theory, he states that complementary colors are also neutralizing colors. For example, when one color is placed on top of the other they cancel each other effect. This is how we find 'repair shades', designed to 'neutralize' the shade in the brow. With the vast experience that NPM has acquired through the years, we've decided to produce pigments that neutralize the red and blue already existing in the pigment in order to prevent customers from doing unnecessary mixing of colors or adding any elements that may end in not getting the end result wanted by our customers.
